Description of Works Required Please provide scaled drawings with all meter / termination positions and the preferred gas supply routes clearly marked, including all existing geography

Site Anomalies and Additional Information

Gas Requirement Details

Unit No. / Name	Peak Hourly Gas Load kW	Estimated Annual Load kWh	Meter Location Internal / Kiosk (if kiosk - by SEL?)	Will any CHP equipment be fitted?*	Will gas boosters be fitted?*

Additional Information

Groundworks, builders works and civil works within the site / private curtilage (including any area within or behind the site hoarding or where works are required through or to any part of the building façade, fabric, external or internal walls, floors, ceilings etc, kiosk or housing or base) are the customer's responsibility and excluded from the scope or offer of works or services by SEL as standard.

Note: The standard inlet pressure at the meter inlet valve is 19 - 21mbar, for any pressure above this a gas booster will be required.

*If you answered yes to either CHP or booster fitted (above), please provide details of this equipment and complete the following form and return with your application: SEL-F04 Non Typical Demand Form
